

Custom Battery Pack Image Request Example

To speed up the process and ensure you receive the correct battery pack we ask you to send a number of photographs of the pack you want replicating.

We require clear photographs of the overall battery pack, labelling and termination (Connector / Flying leads).

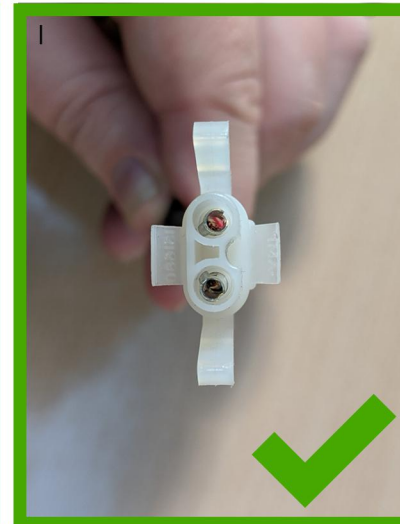

(A) Make sure the full shape of the battery pack can be determined

(B) A ruler allows us to determine size of the battery pack. (C) Include a clear photo of any labelling on the battery.

(F) Multiple photos of the connector are required

(G - J) Multiple angles of the connector are needed to help determine the correct connector. (J) A clear photo of how the wires, from the battery, fit into the connector is important to ensure correct polarity.
